## **Productive Color. Extremely Easy.**

Your business success depends upon your ability to effectively communicate ideas to your clients using large format drawings, designs, exhibits and presentations. The effective use of color in these documents is critically important. Big visual impact can enhance the communication of your ideas, speed up your clients' decision-making process, and enable you to beat deadlines, exceed customer expectations, and grow your business.

In the age of doing more with less, many companies are looking for ways to improve their design workflow and maximize the effectiveness of designers and engineers.

The newest large format color technology from Océ, the Océ TCS400, is the solution that can make a big difference to your organization. The Océ TCS400 delivers outstanding color along with unsurpassed reliability and productivity, all in a single integrated system that consolidates printing, copying, and scanning activities.

Colorful, efficient, reliable—the Océ TCS400 makes wide format color printing, copying, and scanning productive and easy.

# Productive Color. Extremely Easy.

## Print wide format in color. It's easy.

The Océ TCS400 print engine was designed to make wide format color printing as easy as black and white.

Simple multi-roll media handling makes it possible to have different media types and sizes ready for printing, which saves time on trimming. Operator interaction has been minimized. If action is required, it's self-explanatory. Clear wizards guide you through printhead changes or print quality optimization. And the easy-to-use operator panel can be turned to any position for maximum visibility.

## Copy wide format in color. It's easy.

The Océ TCS400 brings true green button copying to wide format color. No color management skills are needed to make a good copy as Océ Image Logic® technology optimizes output for line definition, text readability and background detail.

Automatic width detection, automatic roll selection and deskewing make life even easier. And because no previewing is needed, everything can be managed from the scan unit's operator panel just as on Océ black and white systems. Users immediately feel at home with the system so making a color copy only takes a few seconds of their valuable time.

**Wide format color scan-to-file. It's easy.**

Scanning to file with the Océ TCS400 is also just a matter of pushing the green button. Once again, Océ Image Logic technology processes the scanned data into a high-quality image that can be saved in one of several standard file formats, such as PDF or TIFF.

To keep uniform file sizes and network traffic manageable, the system supports a limited number of discrete levels of scan resolution. And to increase productivity, the Océ Power Logic Controller can be pre-programmed with up to ten destinations in network directories, or even on the web, selectable from the scan unit's operator panel.

**Job processing. It's easy.**

With its processing power and large memory, the Océ Power Logic controller is known for streamlining job processing. But the processor really comes into its own with color printing. Whether submitted via the network or the scanner, bitmaps are generated fast. As a result, the print engine starts almost immediately, reducing waiting time. As files sizes become larger, this becomes the most important aspect in determining the productivity of your printer.

You also get true concurrency. While the print engine outputs one file, another job can be copied or submitted from the network and processed while printing. So the next bitmap is ready for production as soon as the printer is ready. What's more, the productivity of the operator feeding originals is independent of the print engine and you can scan-to-file regardless of the printer's workload.

# Productive Color. Extremely Easy.

1. Copy path
2. Scan to file path
3. Print path

## Control your workflow. It's easy.

The Océ Power Logic controller puts you in charge. Got a print or copy job that can't wait? Use Océ Advanced Queue Manager to print high priority jobs immediately and put others on hold. Need additional copies? Processed jobs remain in the history queue—so there's no need to re-feed or re-submit documents. One click does the job.

Want to monitor the system status? The Océ system control panel shows ink volume, the media loaded and the controller's workload. Install Océ Remote Logic® software and do this all from your desktop.

## Print submission. It's easy.

With Océ drivers and print submission tools, it's easy to produce exactly what you want. Océ drivers provide a wide variety of options. Whatever you choose, the default settings are only a click away. If files are in a printable format, submit them directly—there's no need to open the file in the application.

Use Océ Print Exec™ LT web software to make a job of multiple printable files in seconds using just a standard Internet browser application. For additional functionality, advanced users can opt for various print management functions.

**Future proof and reliable. It's easy.**

The Océ TCS400 has been designed to keep pace with technological developments. With its modular architecture, the system can be upgraded to include greater functionality, making it a safe investment for the future.

You can rely on the solid construction of the Océ TCS400. Like other Océ wide format printing systems, there is a very short paper path minimizing the chance of a paper jam. The multi-printhead design allows for unattended production in the overnight mode so print quality is guaranteed even if you can't monitor it yourself. The proven design of the scan unit offers reliability and thanks to automatic calibration and alignment, output remains consistent for years.

**Everything you need. It's easy.**

In today's world you want to get the most out of your investments. Océ EasyPAC™ programs offer implementation, education and support services, like helpdesk support, on-site preventative and corrective maintenance. Océ also provides a variety of paper, film and other materials. Océ, the world's number one supplier of wide format technical document solutions, delivers everything you need to stay productive.

Océ is a leading supplier of digital document management and delivery technology. The company's solutions are based on Océ's advanced software applications that deliver documents and data over internal networks and the Internet to printing devices and archives—locally and around the world. Supporting the workflow solutions are Océ digital printers and scanners, considered the most reliable and productive in the world. Océ also offers a wide range of consulting and outsourcing solutions.
